DISTRIBUTION

This report has been prepared for the exclusive use of Carebase Ltd. It should not be reproduced in whole or in part, or relied upon by third parties, without the express written authority of Ardent Consulting Engineers.

1.0 INTRODUCTION

- 1.1 Ardent Consulting Engineers has been appointed by Carebase Ltd to advise on flood risk/foul and surface water management matters associated with the proposed redevelopment site situated off Danson Road, in Bexleyheath.
- 1.2 This Flood Risk/Foul & Surface Water Management Statement has been prepared to support a full planning application to redevelop the existing site and provide a 70-bed care home facility, associated car parking provision and landscaping strategy.
- 1.3 The site is situated within a Flood Zone 1 area and the developable area is less than one hectare. As such, a formal site-specific Flood Risk Assessment is not required, although the principles outlined within the National Planning Policy Framework and accompanying web-based Planning Practice Guidance, have continued to be adopted.
- 1.4 The NPPF was originally published in March 2012 (updated in February 2019) by the Ministry for Housing, Communities & Local Government, and is now the acknowledged standard for conducting FRAs/SuDS Statements.
- 1.5 This report aims to demonstrate to the Local Planning Authority and Statutory Consultees that the site can be suitably redeveloped whilst complying with the requirements of the NPPF.
- 1.6 On the basis of this report, supporting evidence is provided to enable the planning application to be determined in terms of flood risk and SuDS/surface water disposal. If additional and/or detailed information is required, it is anticipated that appropriate conditions will be recommended for future consideration.

2.0 BASELINE PARAMETERS

Existing Site

- 2.1 The application site is situated to west of Bexleyheath (as illustrated in **Figure 1**), which is a town in the London Borough of Bexley, Greater London:

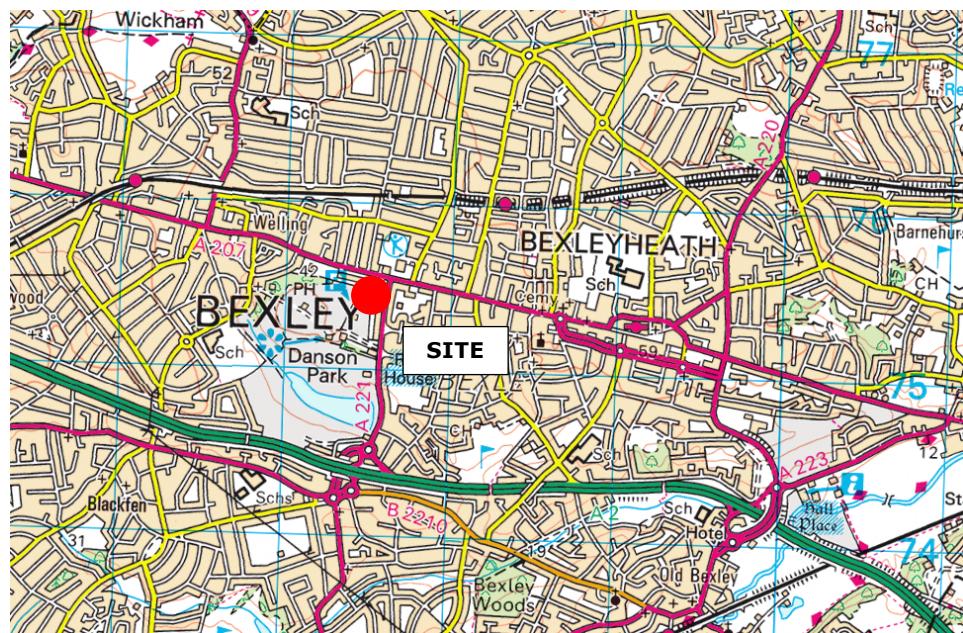

Figure 1: Site's Location

- 2.2 The site's boundaries are formed by: Danson Park to the north and west; the highway of Danson Road to the east; and residential properties to the south.
- 2.3 The application site is situated on an Ordnance Survey grid reference of 547590mE, 175490mN.
- 2.4 The application boundary comprises an area of circa 0.353 hectares, as illustrated in **Figure 2** on the following page.

Figure 2: Aerial Record

2.5 The topographical survey confirms that there is a significant area associated with the existing site comprising roof and parking courtyard as illustrated below. A detailed version of the survey has been included within **Appendix A** of this report for further reference:

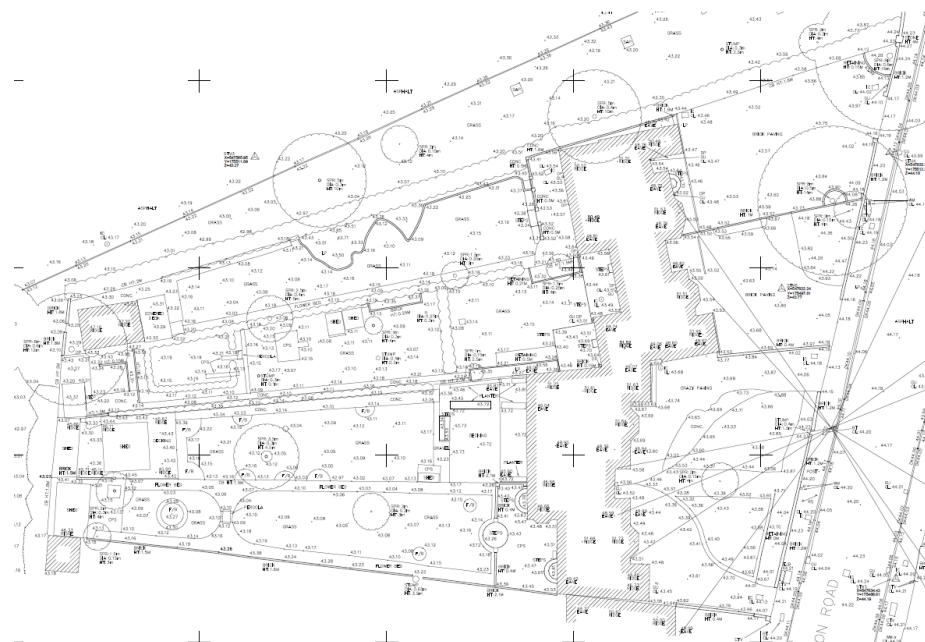

Figure 3: Extract of Topographical Survey

- 2.6 The existing impermeable area is calculated to be circa 1,435m².
- 2.7 The public sewer asset record plan for the local area has been obtained from the Sewerage Undertaker for the region, Thames Water Utilities Ltd, which illustrates that there are no strategic foul or surface water public sewers which traverse the site, as illustrated in **Figure 4** below:

Figure 4: Public Sewer Asset Record Plan

- 2.8 In this respect, no protection or diversion works to strategic sewerage infrastructure is anticipated to accommodate the redevelopment scheme. A copy of the public sewer asset record plans has been provided within **Appendix B** of this report for further reference.

Redevelopment Proposals

- 2.9 A planning application is submitted to the local planning authority at the London Borough of Bexley, which seeks permission to demolish the existing properties and provide a three-storey 70-bed care home with an internal access road, parking provision, landscaping and supporting infrastructure.

- 2.10 A layout of the proposed site has been prepared by the scheme's Architect and Landscape Architect (Ryder Architecture & Tyler Grange Group respectively), which outlines the proposals, as illustrated in **Figure 5** below:

Figure 5: Indicative Masterplan Layout

- 2.11 A detailed version of the layout plan has been provided in **Appendix C** of this report for further reference.

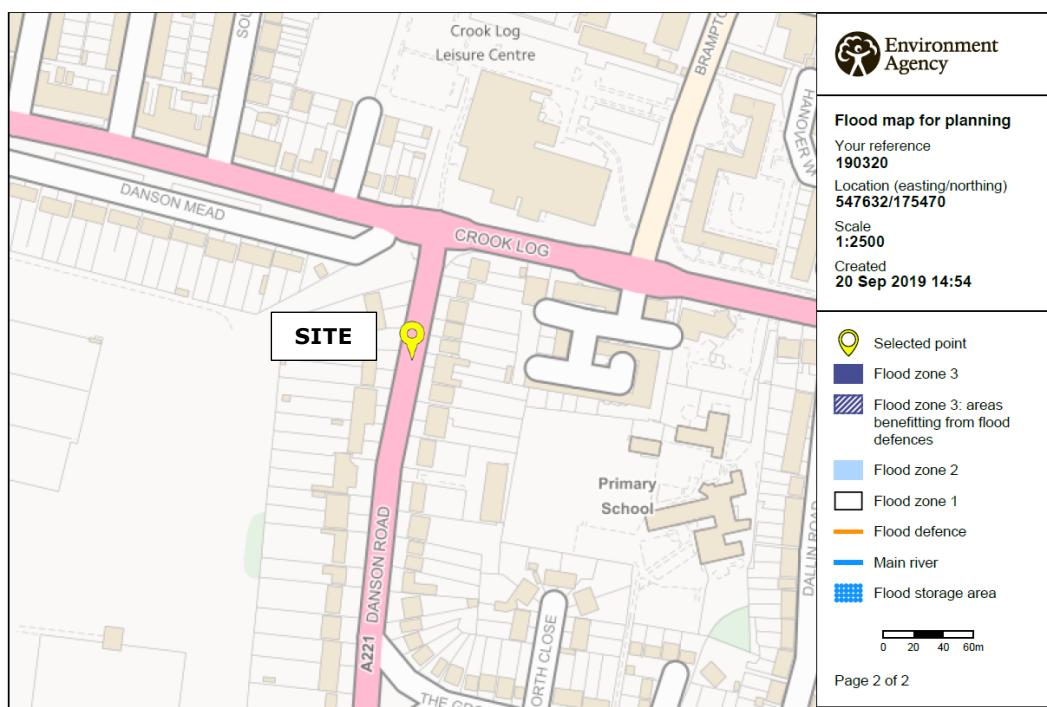

Urban Creep

- 2.12 The impermeable area associated with the proposed development scheme (roof area of 1,194m², roads, driveways, paving etc.) is calculated to be circa 2,618m² with the remainder being soft landscaping.
- 2.13 As the scheme comprises a single-block for the residential care home facility, no future extension will be constructed and therefore an allowance for any urban creep is not deemed necessary in this instance. Therefore, the hydraulic modelling has been based on an impermeable area of 0.262 hectares.

3.0 FLOOD RISK/SURFACE WATER MANAGEMENT

Flood Risk Assessment

- 3.1 According to the Environment Agency's indicative floodplain mapping, the redevelopment site is not deemed to be situated within the indicative undefended floodplain of any nearby designated main river/watercourse and/or tidal estuary, as illustrated in **Figure 6** below:

© Environment Agency copyright and / or database rights 2018. All rights reserved. © Crown Copyright and database right 2018. Ordnance Survey licence number 100024198.

Figure 6: Indicative Fluvial/Tidal Floodplain Extent

- 3.2 The site is therefore classified as a Flood Zone 1 site, at a low probability of fluvial and/or tidal flooding. As the site is situated within a Flood Zone 1 area and the developable area is less than one hectare, a formal site-specific Flood Risk Assessment is not required, although the principles outlined within the National Planning Policy Framework and accompanying web-based Planning Practice Guidance have continued to be adopted.

- 3.3 'Planning Policy Statement 25: Development and Flood Risk' (PPS25) was first published in December 2006 by the Ministry for Housing, Communities & Local Government but has since been replaced by the National Planning Policy Framework (NPPF) which was originally published in March 2012 and subsequently revised in February 2019. This study is therefore based on the latest guidance stated within the NPPF and the accompanying web-based Planning Practice Guidance.
- 3.4 The guidance uses the concept of sequential testing and the risk-based approach to flood risk and development. Development priorities are based on the specific flood risk zones outlined within Table 1 of the Planning Practice Guidance. These flood risk zones have been briefly outlined below for reference:
- Zone 1** - Low probability: Land assessed as having a less than 1 in 1,000-year annual probability of river and sea flooding (<0.1%) in any year;
- Zone 2** – Medium probability: Land assessed as having between a 1 in 100 and 1 in 1,000 annual probability of river flooding (1%-0.1%) and between a 1 in 200 and 1 in 1,000 annual probability of sea flooding (0.5%-0.1%) in any year;
- Zone 3a** – High probability: Land assessed as having a 1 in 100-year or greater annual probability of river flooding (>1%) and a 1 in 200-year or greater annual probability of flooding from the sea (>0.5%) in any year;
- Zone 3b** – Functional floodplain: Land where water has to flow or be stored in times of flood.
- 3.5 Consulting Table 2 contained within the NPPF's Planning Practice Guidance classifies residential care home schemes to be a 'more vulnerable' land-class usage, in terms of flood risk:

More vulnerable
• Hospitals
• Residential institutions such as residential care homes, children's homes, social services homes, prisons and hostels.
• Buildings used for dwelling houses, student halls of residence, drinking establishments, nightclubs and hotels.
• Non-residential uses for health services, nurseries and educational establishments.
• Landfill* and sites used for waste management facilities for hazardous waste.
• Sites used for holiday or short-let caravans and camping, subject to a specific warning and evacuation plan.

3.6 Table 3 of the Planning Practice Guidance (*Flood Risk Vulnerability and Flood Zone 'Compatibility'*) determines that a residential care home scheme in a Flood Zone 1 area, is deemed to be appropriate:

Flood Zones	Flood Risk Vulnerability Classification				
	Essential infrastructure	Highly vulnerable	More vulnerable	Less vulnerable	Water compatible
Zone 1	✓	✓	✓	✓	✓
Zone 2	✓	Exception Test required	✓	✓	✓
Zone 3a †	Exception Test required †	✗	Exception Test required	✓	✓
Zone 3b *	Exception Test required *	✗	✗	✗	✓*

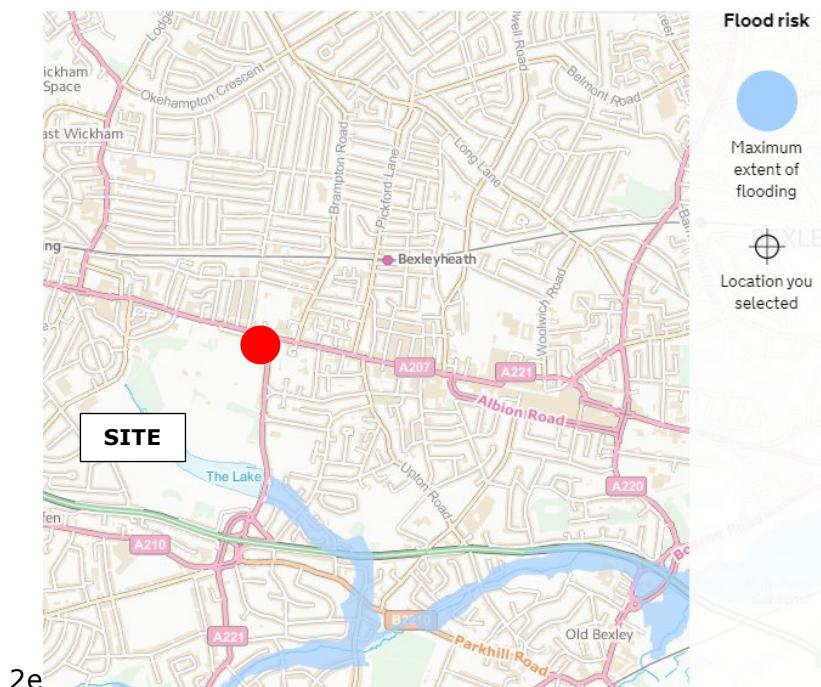

Key:

✓ Development is appropriate

✗ Development should not be permitted.

Other Potential Sources of Flooding

3.7 A further search of the Environment Agency's mapping also confirms that the site is not shown to be susceptible from flooding as a result of a breach of a nearby reservoir flooding, as illustrated in **Figure 7** on the following page.

**Figure 7: Extent of Reservoir Flooding**

3.8 According to the Environment Agency's indicative mapping for the local area, these indicate that the site is partially susceptible to pluvial/surface water flooding for the medium-risk (1:100-year event), which appears to be emanating from the park area to the rear of the site, as illustrated in **Figure 8** below:

**Figure 8: Localised Pluvial/Surface Water Flooding**

- 3.9 To assess the extent of any impact, the flood extent has been analysed in comparison to the existing ground levels and the encroachment extends to a level of circa 43.2mAOD, as illustrated in **Figure 9** below:

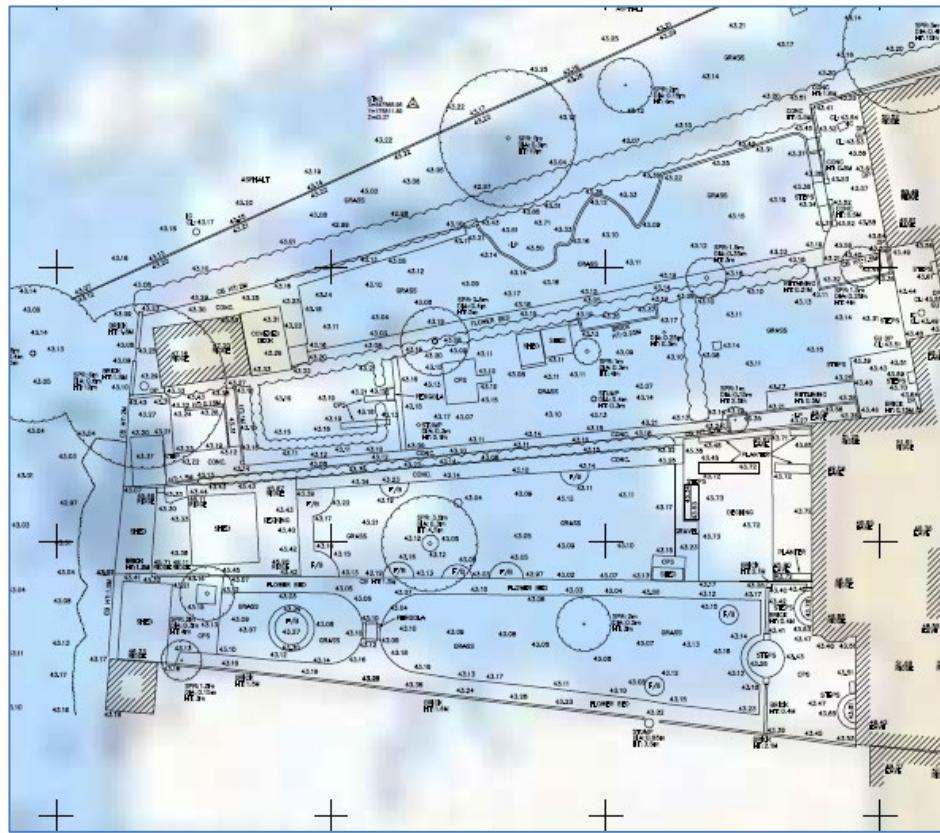

Figure 9: Existing Surface Water Encroachment

- 3.10 To mitigate the risk of any pluvial/surface water flooding impacting upon the layout the ground floor finished floor levels will be set at/above 42.5mAOD to provide a 300mm freeboard tolerance above the 1:100-year flood event.
- 3.11 According to the records held on the British Geological Survey website, a borehole (BGS Reference TQ47NE724) was drilled to a depth of 9.75m to the east of the application site. Groundwater was not encountered therefore it is concluded that the site is not at risk of any groundwater flooding, even allowing for seasonal variances. A

copy of the borehole record has been included within **Appendix D** of this report for further reference.

- 3.12 In view of this assessment, it is concluded that the scheme is not at risk of flooding from any source including fluvial, tidal, a breach of any nearby reservoir, groundwater or pluvial/surface water (due to the proposed mitigation measures offered).

Pre and Post-Development Run-off

- 3.13 According to the topographical survey, there is a significant area of existing hard standing associated with the existing properties and associated driveway/parking areas to the front of the site of 0.1435 hectares, which is calculated to generate a peak surface water run-off rate of 19.4 litres/sec when subjected to a 1:1-year rainfall event with a 50mm per hour rainfall intensity (based on the parameters specified within the '*Wallingford Procedure, Volume 4 – The Modified Rational Method*'):

$$Q_{\text{Discharge}} = 3.61 \text{ Cv i A}$$

$$Q_{\text{Discharge}} = 3.61 \times 0.75 \times 50 \text{ mm} \times 0.1435 \text{ hectares (existing)}$$

Where:

Cv = volumetric run-off coefficient

i = rainfall intensity

A = area

- 3.14 It is therefore concluded that the existing site can generate a total surface water run-off rate of 19.4 litres/sec. However, for the purposes of this assessment, the peak discharge rate will be restricted for all events (up to and including the 1:100-year plus climate change rainfall event) to no greater than **7.8 litres/sec**, thus offering a 60% betterment to the existing scenario should a positive outfall be utilised.

Infiltration Feasibility Appraisal

- 3.15 The above assessment would only be applicable if a positive outfall is utilised to dispose of the surface water run-off from the scheme. The volume of surface water attenuation could be reduced though, if infiltration drainage techniques can be successfully utilised on the site, providing suitable soil conditions exist.
- 3.16 The British Geological Survey record plans for the Bexley area indicate the site is underlain by the London Clay Formation which is described as Clay and Silt, as illustrated in **Figure 10** below:

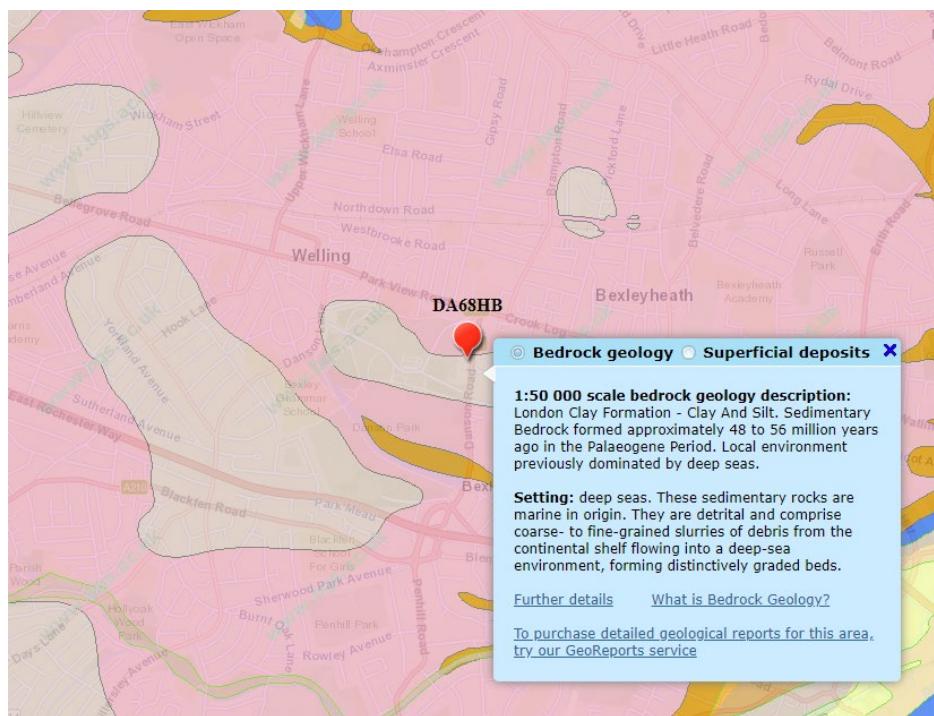

Figure 10: Extract of BGS's Geology Record Plan

- 3.17 In view of the underlying stratum formation, it is considered unlikely that the soil will be suitable for supporting the use of infiltration drainage techniques and therefore an alternative method of disposal is required.
- 3.18 As there is no open channel watercourse/ditch present on-site, a connection to the public sewer present within Danson Road will be

required under S106 of the Water Industry Act 1991, in agreement with Thames Water. An application for a pre-development impact study has been submitted to Thames Water to confirm there is sufficient capacity to accept surface water run-off from the redevelopment scheme.

Attenuation Provision

- 3.19 To drain the site in a sustainable manner whilst complying with the requirements of the NPPF, the strategy will adopt an appropriate form of sustainable drainage systems (SuDS). These forms of SuDS could comprise utilisation of infiltration drainage devices to discharge surface water to the underlying soil stratum (if soil conditions permit), basins/ponds, filter strips and swales, permeable surfaces, geo-cellular units and/or over-sized pipes.
- 3.20 Adopting the design parameters outlined below, the following preliminary assessment has been conducted using Innovyze's 'Micro Drainage' computer hydraulic modelling suite. Within the simulations, we have also included an additional 40% storage provision as allowance for any potential climate change impact (based on the guidance published by the Environment Agency in February 2016 for the year 2070 to 2115 scenario which includes a residential care home scheme):

Variables		
FSR Rainfall	Cv (Summer)	0.750
Return Period (years)	Cv (Winter)	0.840
Region	Impermeable Area (ha)	0.262
Map	Maximum Allowable Discharge (l/s)	7.8
M5-60 (mm)	Infiltration Coefficient (m/hr)	0.00000
Ratio R	Safety Factor	2.0
	Climate Change (%)	40

Results		
Global Variables require approximate storage of between 96 m³ and 138 m³.		

Figure 11: Preliminary Attenuation Simulation

3.21 Based on the above assessment, the preliminary attenuation simulations predict that in the region of 96m³ to 138m³ of storage will be required (including an additional 40% increase as an allowance for climate change impact) to facilitate the surface water run-off from the redevelopment site.

3.22 The above assessment merely provides an initial preliminary estimate of the volume required at this stage of the report. Detailed hydraulic modelling has been included within the SuDS/Surface Water Drainage Strategy section of this report that follows.

SuDS/Surface Water Drainage Strategy

3.23 For the purposes of this assessment, a SuDS/surface water drainage strategy has been prepared to demonstrate how the run-off will be disposed of, and that the system will be capable of withstanding a 1:100-year rainfall event (including an additional 40% as an allowance for climate change).

3.24 To dispose of the surface water run-off generated by the redevelopment scheme, it is anticipated that the run-off will be directed to the nearby public sewer located within Danson Road, at a controlled discharge rate not exceeding 7.8 litres/sec.

3.25 To facilitate the connection works, it is acknowledged that the formal consent will be secured from Thames Water under S106 of the Water Industry Act 1991, once planning permission is granted.

3.26 The principles of the strategy will comprise:

- Surface water run-off will be restricted to a reduced discharge rate no greater than 7.8 litres/sec for all events, up to and including the 1:100-year (plus 40%climate change) rainfall event;
- A suitable flow-control device will be utilised at the outfall to ensure the post-development discharge is not exceeded for events

up to and including the 1:100-year event (including 40% climate change);

- A hydraulic model has been designed which confirms that the SuDS proposals can withstand the impact of a 1:100-year rainfall event (including an additional 40% as an allowance for potential climate change impact). A copy of the hydraulic simulation output files has been included within **Appendix D** of this report for reference;
- The peak water level in the system at the outfall is deemed to be 43.268m AOD generated by a 240-minute winter profile for the 1:100-year rainfall event (including an additional 40% as an allowance for climate change impact):

Storm Event	Max Level (m)	Max Depth (m)	Max Infiltration (1/s)	Max Control (1/s)	Σ Outflow (1/s)	Max Volume (m³)	Status

- To accommodate the attenuated volume generated by the 1:100-year rainfall event (including an additional 40% as an allowance for climate change), the run-off will be contained within a system of permeable paving with effective storage depth of 300mm within the granular drainage medium reservoir course;

- A geo-cellular attenuation system at the outfall will also provide further storage which will comprise 40m² x 1.2m in depth. The units will be required to withstand vehicular loading where located under the parking courtyard;
 - To mitigate the risk of the run-off being polluted, the parking area shall be constructed as a lined permeable paving system to allow any contaminants to be filtered as the run-off passes through the granular drainage medium reservoir course. A 30% void ratio is modelled for the granular reservoir material;
 - The drainage medium reservoir course will also include a specialist membrane which will provide a further level of treatment to remove any contaminants that are present in the surface water run-off prior to leaving the site;
- 3.27 The principles of the SuDS/surface water drainage strategy have been presented on **Drawing No. 190320-002** and appended to this report for further reference.
- Water Quality Assessment***
- 3.28 A 70-bed residential care home scheme with access to parking provision, would fall within the low-pollution indices, as outlined in Table 26.2 of Chapter 26 within the CIRIA SuDS Manual 753.
- 3.29 The following tables outline the water quality assessment in accordance with CIRIA SuDS Manual 753:

Land-use	Pollution hazard level	Total suspended solids (TSS)	Metals	Hydrocarbons
Residential roofs	Very low	0.2	0.2	0.05
Other roofs (typically commercial/industrial roofs)	Low	0.3	0.2 (up to 0.8 where there is potential for metals to leach from the roof)	0.05
Individual property driveways, residential car parks, low traffic roads (e.g. cul-de-sacs, home zones and general access roads) and non-residential car parking with infrequent change (e.g. schools, offices) i.e. < 300 traffic movements/day	Low	0.5	0.4	0.4
Commercial yard and delivery areas, non-residential car parking with frequent change (e.g. hospitals, retail), all roads except low traffic roads and trunk roads/motorways	Medium	0.7	0.6	0.7
Sites with heavy pollution (e.g. haulage yards, lorry parks, highly frequented lorry approaches to industrial estates, waste sites), sites where chemicals and fuels (other than domestic fuel oil) are to be delivered, handled, stored, used or manufactured; industrial sites; trunk roads and motorways	High	0.8	0.8	0.9

**Table 1: Pollution hazard indices for different land-use classifications
 (land-use shaded yellow applicable for the development)**

3.30 To ensure the target-indices are met, the following performance can be expected from the SuDS/surface water drainage strategy:

Type of SuDS component	Mitigation indices		
	TSS	Metals	Hydrocarbons
Filter strip	0.4	0.4	0.5
Filter drain	0.4	0.4	0.4
Swale	0.5	0.6	0.6
Bio retention system	0.8	0.8	0.8
Permeable pavement	0.7	0.6	0.7
Detention basin	0.5	0.5	0.6
Pond	0.7	0.7	0.5
Wetland	0.8	0.8	0.8
Downstream Defender (Proprietary Treatment System*)	0.5	0.4	0.8

*Proprietary treatment systems	These must demonstrate that they can address each of the contaminant types to acceptable levels for frequent events up to approximately the 1 in 1-year return period event, for inflow concentrations relevant to the contributing drainage area.
--------------------------------	--

Table 2: Indicative SuDS mitigation indices for discharges to surface waters (SuDS components shaded yellow applicable to this development)

Individual property driveways, residential car parks, low traffic roads (e.g. cul-de-sacs, home zones and general access roads) and non-residential car parking with infrequent change (e.g. schools, offices) i.e. < 300 traffic movements/day			
Required mitigation indices			
Source	TSS	Metals	Hydrocarbons
Low	0.5	0.4	0.4
Mitigation Indices			
Permeable Pavement <i>(Mitigation index₁)</i>	0.7	0.6	0.7
Proprietary Product <i>(Mitigation index₂)</i>	N/A	N/A	N/A
Total Performance	0.7	0.6	0.7
Check	Criteria Exceeded	Criteria Exceeded	Criteria Exceeded

Total SuDS mitigation index = mitigation index₁ + (0.5 x mitigation index₂)

Table 3: Indicative SuDS mitigation indices for discharge to surface waters

- 3.31 As demonstrated in **Tables 1 to 3** above, the mitigation of pollution provided by the development is appropriate for the low-risk, it represents. The performance criteria can be met by implementing a permeable paving system.

Maintenance Regime

- 3.32 To ensure that the system is regularly maintained, it is anticipated that the external drainage systems will be placed under a formal agreement with an independent Maintenance Company to carry out periodic inspections and any necessary remediation/maintenance works, thus safeguarding the development for the on-going future.

4.0 FOUL WATER DRAINAGE

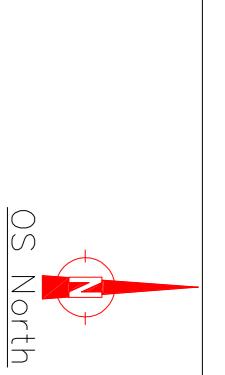

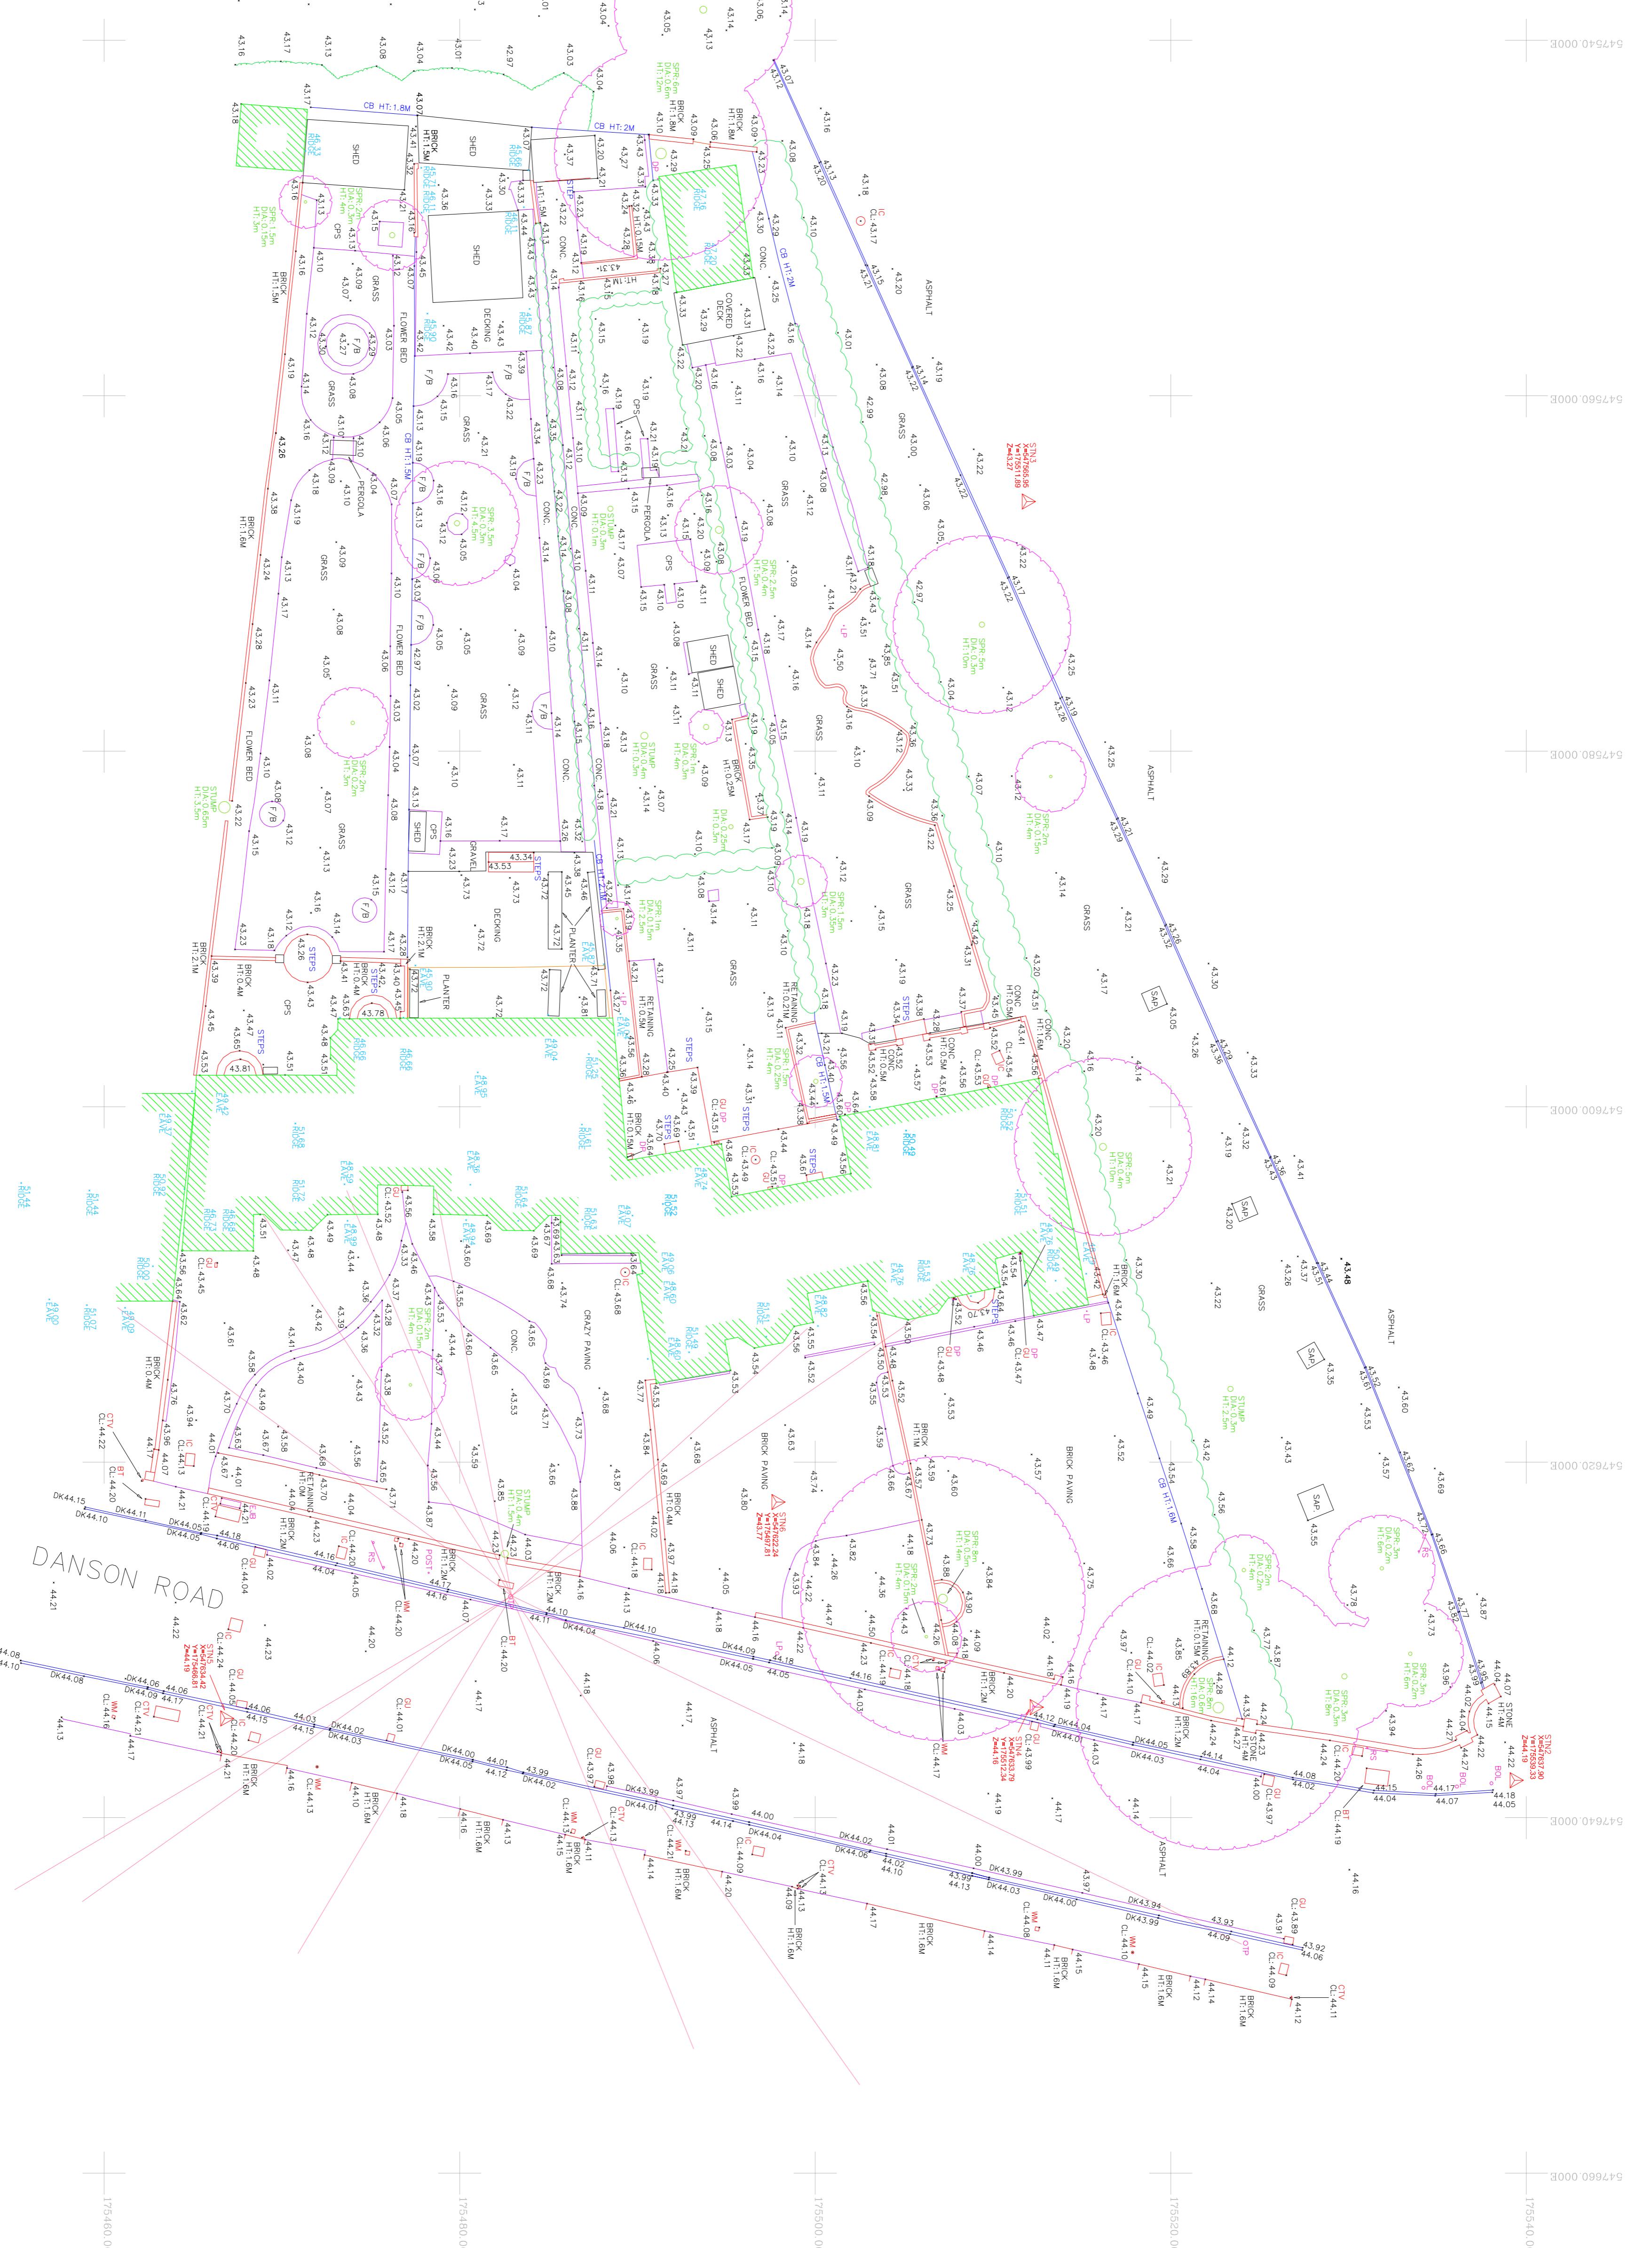

- 4.1 The Sewerage Undertaker for the area is Thames Water Utilities Ltd and a copy of the public sewer asset record plan has been obtained and provided within **Appendix B** of this report for further reference.
- 4.2 The asset record plan confirms that there is a 225mm diameter foul water public sewer present within Danson Road, running across the site's eastern frontage in the highway. There are no strategic public sewers which cross the site which would need diverting.
- 4.3 The peak post-development foul water flow for the proposed 70-bed residential care home scheme is predicted to be 2 litres/sec, based on 375 litres/bed per 24-hours (6DWF+10%). An application for a pre-development impact study has been submitted to Thames Water to confirm there is sufficient capacity to accept the foul water flow from the redevelopment scheme.
- 4.4 To facilitate the drainage connection, the necessary connection consent will be obtained from Thames Water under S106 of the Water Industry Act 1991 to facilitate these works. The application will be submitted once the scheme secures planning permission.
- 4.5 The principles of the proposed foul water drainage strategy have been presented on **Drawing No. 190320-002** and appended to this report for further reference.

5.0 SUMMARY & RECOMMENDATIONS

- 5.1 The proposal to redevelop the existing site is considered to follow the national planning legislation which prefers the redevelopment of previously developed brownfield sites.
- 5.2 A residential care home scheme located in a Flood Zone 1 area is deemed to be suitable for development, as defined by the NPPF.
- 5.3 The site is not at risk of flooding from a fluvial source and/or tidal estuary, groundwater or a breach of any nearby reservoir. The risks associated with any pluvial/surface water flooding emerging from the adjacent park will be suitably mitigated by setting the ground floor level above the floodwater to provide a provision of freeboard.
- 5.4 No strategic foul or surface water public sewer networks traverse the site and therefore no protection/diversion works are anticipated.
- 5.5 An allowance for any future urban creep has not been included in the assessment as the scheme comprises single block which will not be extended without securing a separate planning consent for any alterations.
- 5.6 Detailed hydraulic modelling has been carried out which demonstrates that the proposed SuDS/surface water drainage system can withstand the impact of a 1:100-year rainfall event (including an additional 40% as an allowance for climate change), thus complying with the requirements of the NPPF.
- 5.7 In view of this assessment, the report concludes that:
 - i. The redevelopment scheme and its occupants will not be at an increased risk of flooding;
 - ii. The redevelopment scheme will not increase the risk of flooding elsewhere;
 - iii. A sustainable drainage scheme can be implemented.

5.8 The findings of this report identify the opportunity to provide a scheme which fully adopts the principles outlined within the NPPF. In this respect, it is anticipated that planning permission can be granted for this application on flood risk and drainage matters. Where additional or further information is required, appropriate planning conditions should be recommended for future consideration.

Notes

The survey has been orientated to Ordnance Survey (OS) National Grid (OSGB36), using Industry Standard Network RTK GPS equipment utilising the OS Active Network (OS Net). A true OSGB36 coordinate has been established on site using the OSN15 (Transformation) & OSGB15 (geoid) models. The survey detail has been corrected to this point and a further one (or more) OSGB36 points established to produce a true OS bearing for angle orientation. Scale factor 1.0 has been applied therefore the survey coordinates are shown on a pre-existing OS grid. All dimensions are in metres unless otherwise specified.

Property Searches

Search address supplied: Danson Road, Bexleyheath, DA6 8HB

Dear Sir / Madam

An Asset Location Search is recommended when undertaking a site development. It is essential to obtain information on the size and location of clean water and sewerage assets to safeguard against expensive damage and allow cost-effective service design.

The following records were searched in compiling this report: - the map of public sewers & the map of waterworks. Thames Water Utilities Ltd (TWUL) holds all of these.

This search provides maps showing the position, size of Thames Water assets close to the proposed development and also manhole cover and invert levels, where available.

Please note that none of the charges made for this report relate to the provision of Ordnance Survey mapping information. The replies contained in this letter are given following inspection of the public service records available to this company. No responsibility can be accepted for any error or omission in the replies.

You should be aware that the information contained on these plans is current only on the day that the plans are issued. The plans should only be used for the duration of the work that is being carried out at the present time. Under no circumstances should this data be copied or transmitted to parties other than those for whom the current work is being carried out.

Thames Water do update these service plans on a regular basis and failure to observe the above conditions could lead to damage arising to new or diverted services at a later date.

Contact Us

If you have any further queries regarding this enquiry please feel free to contact a member of the team on 0845 070 9148, or use the address below:

Asset location search

Property Searches

Waste Water Services

Please provide a copy extract from the public sewer map.

Enclosed is a map showing the approximate lines of our sewers. Our plans do not show sewer connections from individual properties or any sewers not owned by Thames Water unless specifically annotated otherwise. Records such as "private" pipework are in some cases available from the Building Control Department of the relevant Local Authority.

Where the Local Authority does not hold such plans it might be advisable to consult the property deeds for the site or contact neighbouring landowners.

This report relates only to sewerage apparatus of Thames Water Utilities Ltd, it does not disclose details of cables and or communications equipment that may be running through or around such apparatus.

The sewer level information contained in this response represents all of the level data available in our existing records. Should you require any further Information, please refer to the relevant section within the 'Further Contacts' page found later in this document.

For your guidance:

- The Company is not generally responsible for rivers, watercourses, ponds, culverts or highway drains. If any of these are shown on the copy extract they are shown for information only.
- Any private sewers or lateral drains which are indicated on the extract of the public sewer map as being subject to an agreement under Section 104 of the Water Industry Act 1991 are not an 'as constructed' record. It is recommended these details be checked with the developer.

Clean Water Services

Please provide a copy extract from the public water main map.

Enclosed is a map showing the approximate positions of our water mains and associated apparatus. Please note that records are not kept of the positions of individual domestic supplies.

For your information, there will be a pressure of at least 10m head at the outside stop valve. If you would like to know the static pressure, please contact our Customer Centre on 0800 316 9800. The Customer Centre can also arrange for a full flow and pressure test to be carried out for a fee.

Asset location search

Property Searches

For your guidance:

- Assets other than vested water mains may be shown on the plan, for information only.
- If an extract of the public water main record is enclosed, this will show known public water mains in the vicinity of the property. It should be possible to estimate the likely length and route of any private water supply pipe connecting the property to the public water network.

Payment for this Search

A charge will be added to your suppliers account.

Further contacts:

Waste Water queries

Should you require verification of the invert levels of public sewers, by site measurement, you will need to approach the relevant Thames Water Area Network Office for permission to lift the appropriate covers. This permission will usually involve you completing a TWOSA form. For further information please contact our Customer Centre on Tel: 0845 920 0800. Alternatively, a survey can be arranged, for a fee, through our Customer Centre on the above number.

If you have any questions regarding sewer connections, budget estimates, diversions, building over issues or any other questions regarding operational issues please direct them to our service desk. Which can be contacted by writing to:

No liability of any kind whatsoever is accepted by Thames Water for any error or omission. The actual position of mains and services must be verified and established on site before any works are undertaken.

ALS Sewer Map Key

Public Sewer Types (Operated & Maintained by Thames Water)

	Foul: A sewer designed to convey waste water from domestic and industrial sources to a treatment works.
	Surface Water: A sewer designed to convey surface water (e.g. rain water from roofs, yards and car parks) to rivers or watercourses.
	Combined: A sewer designed to convey both waste water and surface water from domestic and industrial sources to a treatment works.
	Trunk Surface Water
	Trunk Foul
	Storm Relief
	Trunk Combined
	Vent Pipe
	Bio-solids (Sludge)
	Proposed Thames Surface Water Sewer
	Proposed Thames Water Foul Sewer
	Gallery
	Foul Rising Main
	Surface Water Rising Main
	Combined Rising Main
	Sludge Rising Main
	Vacuum

Notes:

- 1) All levels associated with the plans are to Ordnance Datum Newlyn.
- 2) All measurements on the plans are metric.
- 3) Arrows (on gravity fed sewers) or flecks (on rising mains) indicate direction of flow.
- 4) Most private pipes are not shown on our plans, as in the past, this information has not been recorded.
- 5) 'na' or '0' on a manhole level indicates that data is unavailable.

Sewer Fittings

A feature in a sewer that does not affect the flow in the pipe. Example: a vent is a fitting as the function of a vent is to release excess gas.

	Air Valve
	Dam Chase
	Fitting
	Meter
	Vent Column

Operational Controls

A feature in a sewer that changes or diverts the flow in the sewer. Example: A hydrobrake limits the flow passing downstream.

	Control Valve
	Drop Pipe
	Ancillary
	Weir

End Items

End symbols appear at the start or end of a sewer pipe. Examples: an Undefined End at the start of a sewer indicates that Thames Water has no knowledge of the position of the sewer upstream of that symbol. Outfall on a surface water sewer indicates that the pipe discharges into a stream or river.

	Outfall
	Undefined End
	Inlet

Other Symbols

Symbols used on maps which do not fall under other general categories

	▲/▲ Public/Private Pumping Station
	* Change of characteristic indicator (C.O.C.I.)
	☒ Invert Level
	<1 Summit

Areas

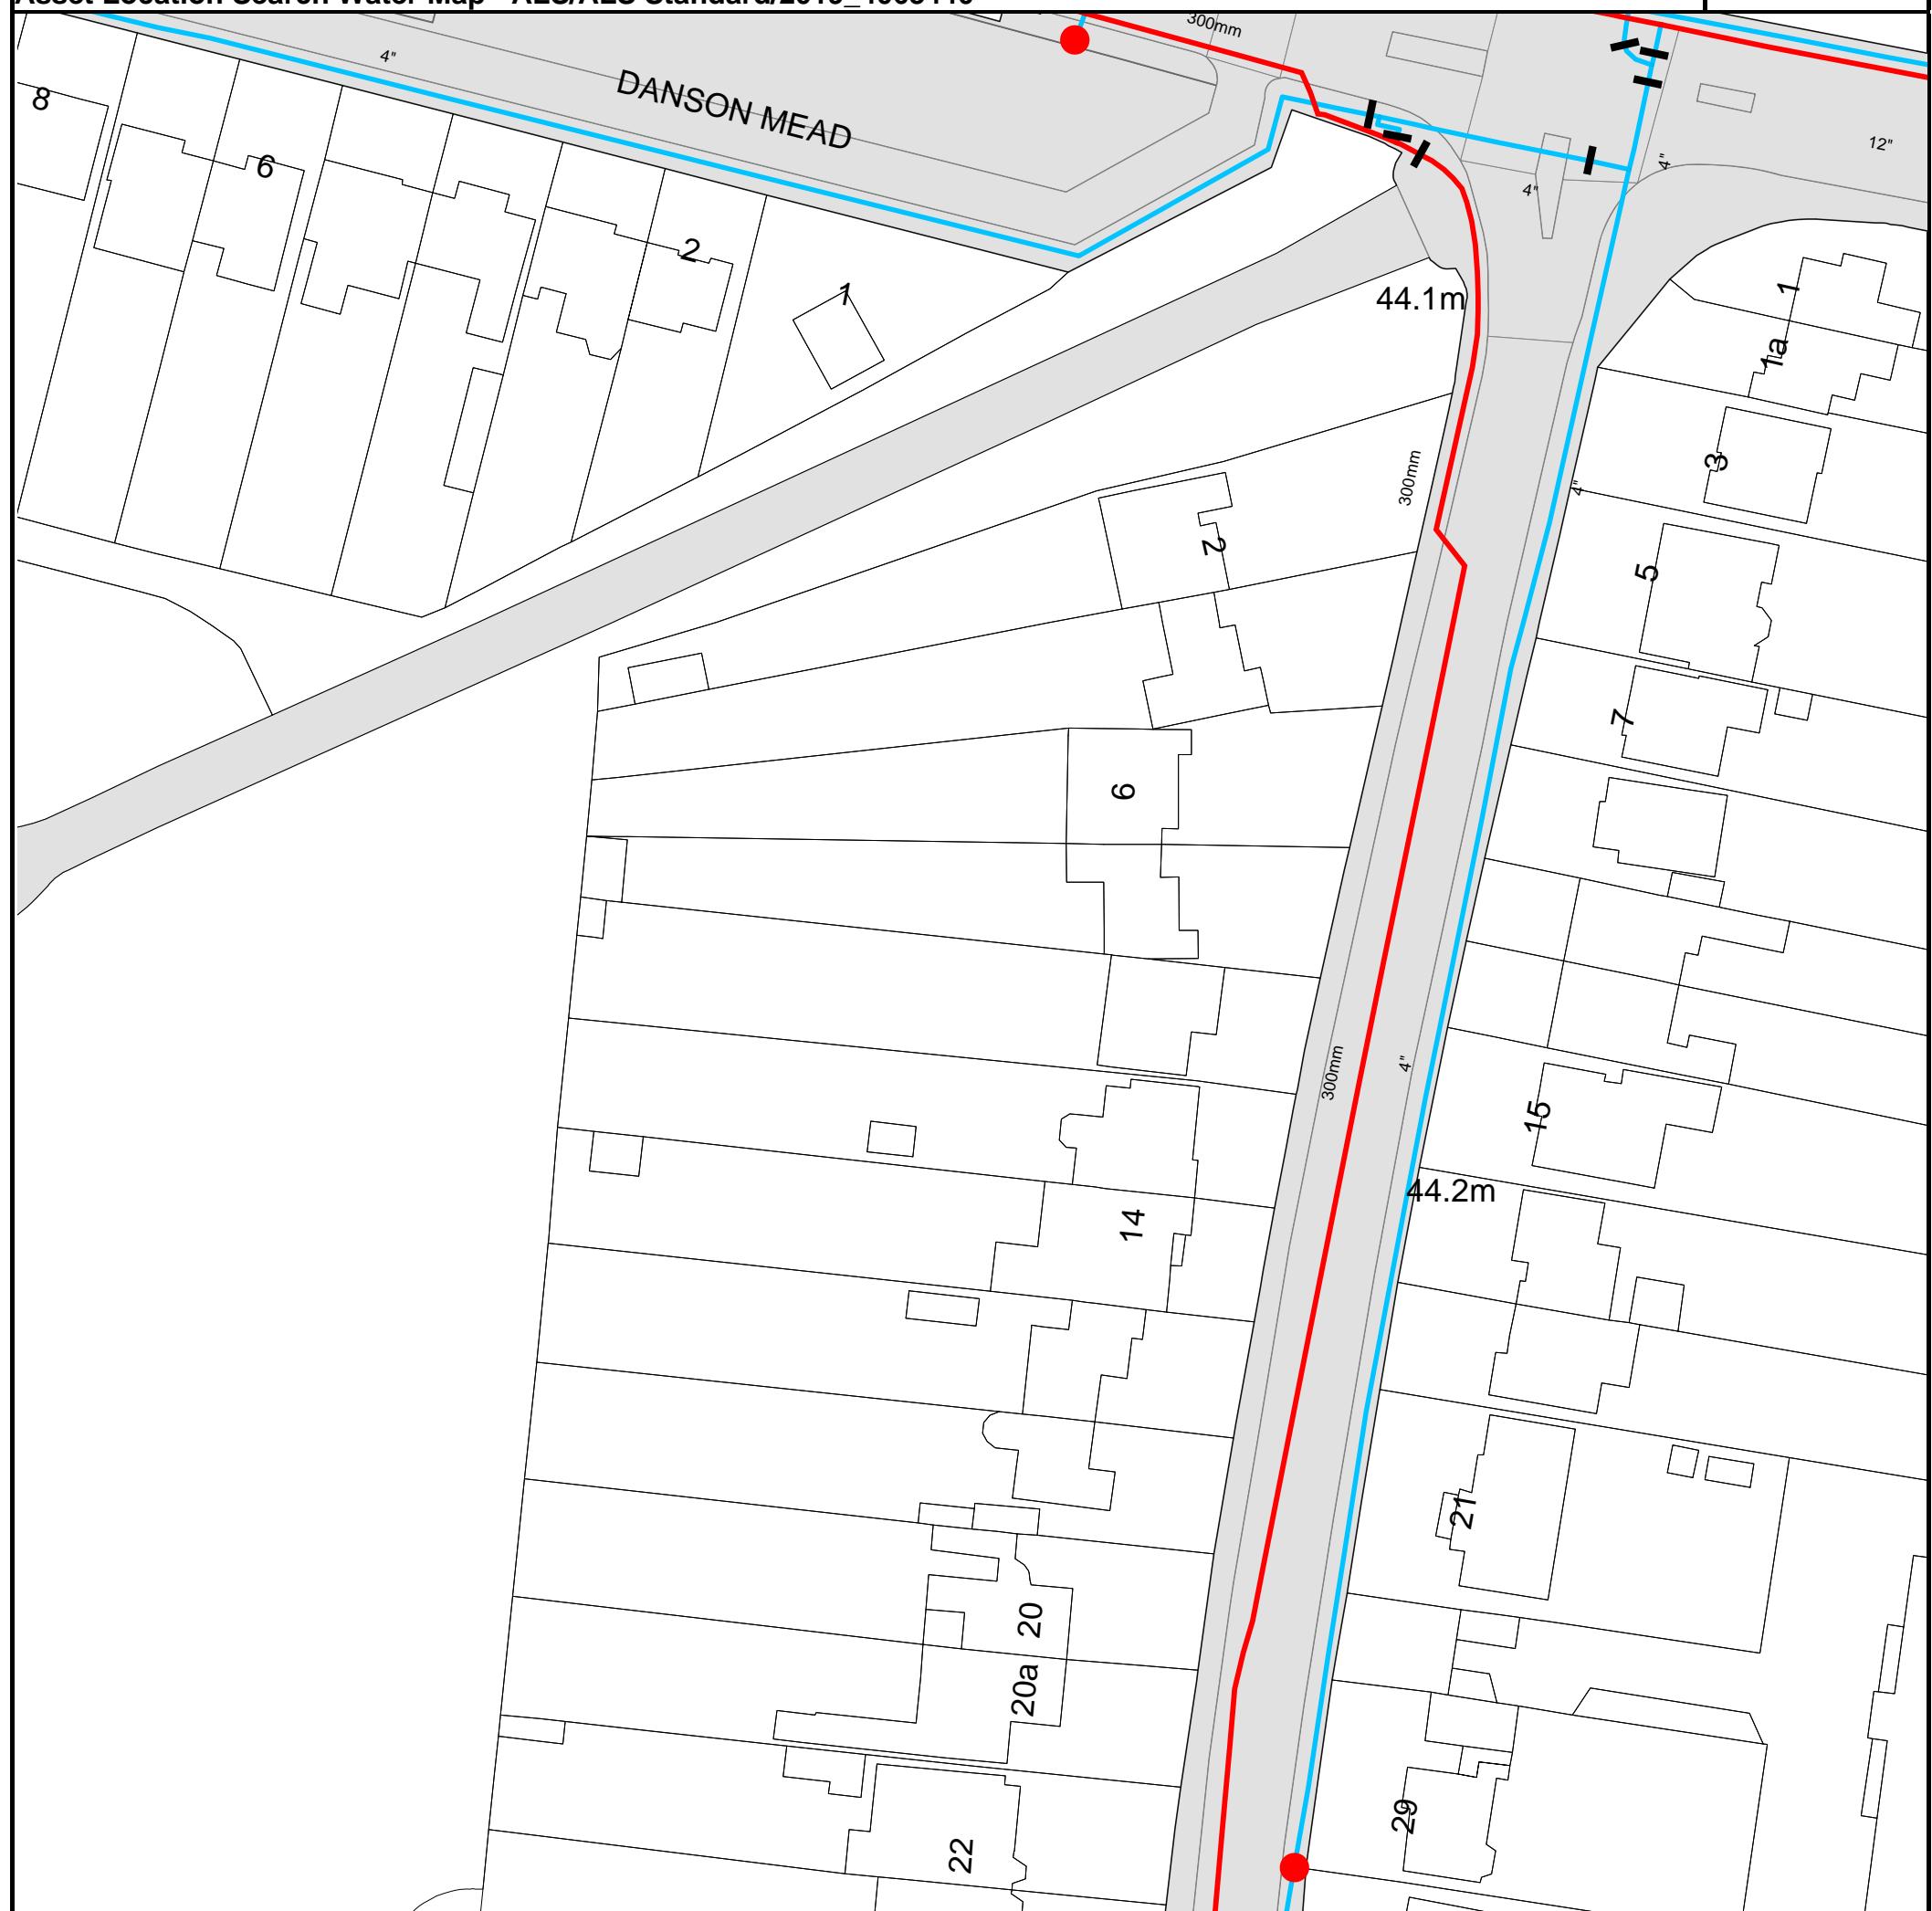

Lines denoting areas of underground surveys, etc.

	Agreement
	Operational Site
	Chamber
	Tunnel
	Conduit Bridge

Other Sewer Types (Not Operated or Maintained by Thames Water)

	Foul Sewer		Surface Water Sewer
	Combined Sewer		Gully
	Culverted Watercourse		Proposed
	Abandoned Sewer

ALS Water Map Key

Water Pipes (Operated & Maintained by Thames Water)

- 4"** **Distribution Main:** The most common pipe shown on water maps. With few exceptions, domestic connections are only made to distribution mains.
- 16"** **Trunk Main:** A main carrying water from a source of supply to a treatment plant or reservoir, or from one treatment plant or reservoir to another. Also a main transferring water in bulk to smaller water mains used for supplying individual customers.
- 3" SUPPLY** **Supply Main:** A supply main indicates that the water main is used as a supply for a single property or group of properties.
- 3" FIRE** **Fire Main:** Where a pipe is used as a fire supply, the word FIRE will be displayed along the pipe.
- 3" METERED** **Metered Pipe:** A metered main indicates that the pipe in question supplies water for a single property or group of properties and that quantity of water passing through the pipe is metered even though there may be no meter symbol shown.
- Transmission Tunnel:** A very large diameter water pipe. Most tunnels are buried very deep underground. These pipes are not expected to affect the structural integrity of buildings shown on the map provided.
- Proposed Main:** A main that is still in the planning stages or in the process of being laid. More details of the proposed main and its reference number are generally included near the main.

PIPE DIAMETER	DEPTH BELOW GROUND
Up to 300mm (12")	900mm (3')
300mm - 600mm (12" - 24")	1100mm (3' 8")
600mm and bigger (24" plus)	1200mm (4')

Valves

- General Purpose Valve
- Air Valve
- Pressure Control Valve
- Customer Valve

Hydrants

- Single Hydrant

Meters

- Meter

End Items

Symbol indicating what happens at the end of a water main.

- Blank Flange
- Capped End
- Emptying Pit
- Undefined End
- Manifold
- Customer Supply
- Fire Supply

Operational Sites

- Booster Station
- Other
- Other (Proposed)
- Pumping Station
- Service Reservoir
- Shaft Inspection
- Treatment Works
- Unknown
- Water Tower

Other Symbols

- Data Logger

Other Water Pipes (Not Operated or Maintained by Thames Water)

Other Water Company Main: Occasionally other water company water pipes may overlap the border of our clean water coverage area. These mains are denoted in purple and in most cases have the owner of the pipe displayed along them.

Private Main: Indicates that the water main in question is not owned by Thames Water. These mains normally have text associated with them indicating the diameter and owner of the pipe.

Terms and Conditions

All sales are made in accordance with Thames Water Utilities Limited (TWUL) standard terms and conditions unless previously agreed in writing.

1. All goods remain in the property of Thames Water Utilities Ltd until full payment is received.
2. Provision of service will be in accordance with all legal requirements and published TWUL policies.
3. All invoices are strictly due for payment 14 days from due date of the invoice. Any other terms must be accepted/agreed in writing prior to provision of goods or service, or will be held to be invalid.
4. Thames Water does not accept post-dated cheques-any cheques received will be processed for payment on date of receipt.
5. In case of dispute TWUL's terms and conditions shall apply.
6. Penalty interest may be invoked by TWUL in the event of unjustifiable payment delay. Interest charges will be in line with UK Statute Law 'The Late Payment of Commercial Debts (Interest) Act 1998'.
7. Interest will be charged in line with current Court Interest Charges, if legal action is taken.
8. A charge may be made at the discretion of the company for increased administration costs.

A copy of Thames Water's standard terms and conditions are available from the Commercial Billing Team (cashoperations@thameswater.co.uk).

We publish several Codes of Practice including a guaranteed standards scheme. You can obtain copies of these leaflets by calling us on 0800 316 9800

If you are unhappy with our service you can speak to your original goods or customer service provider. If you are not satisfied with the response, your complaint will be reviewed by the Customer Services Director. You can write to her at: Thames Water Utilities Ltd. PO Box 492, Swindon, SN38 8TU.

If the Goods or Services covered by this invoice falls under the regulation of the 1991 Water Industry Act, and you remain dissatisfied you can refer your complaint to Consumer Council for Water on 0121 345 1000 or write to them at Consumer Council for Water, 1st Floor, Victoria Square House, Victoria Square, Birmingham, B2 4AJ.

Search Code

IMPORTANT CONSUMER PROTECTION INFORMATION

This search has been produced by Thames Water Property Searches, Clearwater Court, Vastern Road, Reading RG1 8DB, which is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code:

- provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom
- sets out minimum standards which firms compiling and selling search reports have to meet
- promotes the best practise and quality standards within the industry for the benefit of consumers and property professionals
- enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.

By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award compensation of up to £5,000 to you if the Ombudsman finds that you have suffered actual loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the code.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs Contact Details

B .. Bulk Samples.

W .. Water Samples.

U .. Undisturbed Core Samples. These are nominal 4 in. diam. and 18 in. long. Depths shown are top of sample.

N .. Number of blows per ft. penetration.
